

Pick by Voice: Hands and eyes free for order picking

PickTerm Voice: The latest generation of speech-controlled, paperless picking systems

Included in the product:

- Robust VOXter® speech client including charging cradle, replaceable battery, power adapter, manual
- PickTerm Voice speech system with topSPEECH-Lydia®
- Connection to your host system and optimum control of your picking processes

Flexible interfaces

- PickTerm Flexible Pick by Light
- Warehouse management systems
- ERP / SAP

VOXter® features:

Integrated radio:

Wi-Fi (802.11b/g),
Option: Bluetooth headset

Operating temperature:

-30°C to 50°C

Operating time:

up to 14 hours

Additional optional clients:

topSPEECH-Lydia® runs on many off-the-shelf mobile computers with Windows Mobile or Windows CE

When using PickTerm Voice with topSPEECH-Lydia®, your employees are equipped only with a headset and a mobile computer (speech client) that is worn comfortably on the belt. Bothersome paper lists and mobile data terminals are finally a thing of the past.

More efficiency with speech control

All information, such as the storage position and the quantity to be issued, is spoken aloud by the system and confirmed immediately by the employee by speech input. Your employees have their hands and eyes free for every important work step, so they're faster and more focused when moving around the warehouse – leading to significant improvements in work efficiency and picking quality.

Language-independent system for the highest possible flexibility

By using just a few clear spoken commands, your employees are trained in the shortest possible time. Thanks to the speaker-independent technology, no speech training is necessary, so even temporary or seasonal workers can be working with PickTerm Voice immediately.

Can work together with Pick by Light

PickTerm Voice can seamlessly integrate into any system in the KBS PickTerm family. Combining it with Pick by Light for stationary shelves or on picking vehicles makes completely new applications a reality.

Different applications

Goods acceptance, cross-docking, picking, moves, replenishment, just-in-time/kanban supply, inventory, quality control, the use of checklists/forms, goods issuing, etc.

Your advantages at a glance

- Reduction in error rates
- Increasing efficiency
- Fast training
- Natural speech output with a human voice increases acceptance among your employees
- Available in many local languages
- Reliable speech recognition in a loud environment using special audio filters
- "Made in Germany"
